

Coding & Solution

Date: 01 July 2026
Team ID: XXXXXX
Project Name: Rising Water
Maximum Marks: 5 Marks

This section evaluates the quality and completeness of the implemented code for the Rising Water project. The solution demonstrates clean coding practices, modular design, reliable functionality, and alignment with the project's objective of monitoring rising water levels and generating timely flood alerts.

Instructions

- Ensure the code is modular, well-commented, and follows Python best practices.
- Implement preprocessing, prediction, alert generation, and visualization modules.
- Include all source files, configuration files, and setup instructions.
- Provide the project repository link in the summary table.

Field	Details
Repository Link / URL	[Paste GitHub Repository Link Here]
Programming Language(s)	Python
Framework(s) Used	Flask, TensorFlow, OpenCV, Matplotlib
Key Features Implemented	Water level monitoring, Rising water prediction, Flood alert generation, Dashboard
Pending / Incomplete Features	SMS/Email alerts (optional)
Setup / Run Instructions	Install dependencies, run app.py, upload data, view predictions

Code Quality Checklist

Criteria	Status
Code is modular and organized into functions/classes	Yes
Meaningful variable and function names are used	Yes
Code includes comments/documentation where necessary	Yes
Error handling is implemented for critical operations	Yes
Application runs without critical errors	Yes
Code is committed to a version control repository	Yes

Additional Notes / Comments: The Rising Water project follows a clean, maintainable architecture with reusable modules for preprocessing, prediction, visualization, and alert generation.
